COLLEGE: chellammal women's college

**PROJECT TITLE**

# **Employee Performance Analysis using Excel**

# AGENDA

1. Problem Statement
2. Project Overview
3. End Users
4. Our Solution and Proposition
5. Dataset Description
6. Modelling Approach
7. Results and Discussion
8. Conclusion

# PROBLEM STATEMENT

A **problem statement** is a description of an issue to be addressed, or a condition to be improved upon. It identifies the gap between the current problem and goal. The first condition of solving a problem is understanding the problem, which can be done by way of a problem statement.

Problem statements are used by most businesses and organizations to execute process improvement projects.

# PROJECT OVERVIEW

A project overview is a document that summarizes a project's key details, including its goals, objectives, and steps to achieve them. It also outlines the project's schedule, budget, resources, and status. A project overview can help simplify complex information into a single document that can be easily managed throughout the project's lifecycle.

# WHO ARE THE END USERS?

An end user is a person or other entity that consumes or makes use of the goods or services produced by businesses. In this way, an end user may differ from a customer since the entity or person that buys a product or service may not be the one who actually uses it.

# OUR SOLUTION AND ITS VALUE PROPOSITION

A value proposition is a short statement that communicates why buyers should choose your products or services. It's more than just a product or service description — it's the specific solution that your business provides and the promise of value that a customer can expect you to deliver.<sup>6</sup>

# Dataset Description

A Dataset is a set or collection of data. This set is normally presented in a tabular pattern. Every column describes a particular variable. And each row corresponds to a given member of the data set, as per the given question. This is a part of data management.

# THE "WOW" IN OUR SOLUTION

Every time I travel to Boston, I stay in the same hotel. It's not fancy and the location isn't great, but they know how to wow a customer. The way that I'm treated when I go there has always left an impression on me.

The first time I stayed there, I arrived in the dead of winter. My face was chapped, and my hands were raw as I checked in.

# MODELLING

**Modelling** ("modeling" in American English) is considered to be different from other types of public performance, such as acting or dancing; thus, appearing in a film or a play is not generally considered to be "modelling". Personal opinions are normally not expressed, and a model's reputation and image are considered critical.

Types of modelling include: fine art, fashion, glamour, fitness, and body-part promotional modelling. Models are featured in various media formats, including books, magazines, films, newspapers, the Internet, and television. Fashion modelling is sometimes featured in reality TV shows (*America's Next Top Model*).

# RESULTS

Sure! Could you please clarify what results you're referring to? Are they related to a specific study, project, or analysis? This will help me provide a more accurate conclusion for you.

# conclusion

Certainly! Could you provide more context or specify the topic for which you need a conclusion? That way, I can tailor it to your needs.
